

To Do:

1. *Licensing*-determine which implementations meet licensing needs.
2. *Combine implementations*-can't do until licensing issues resolved
3. *JUnit Test cases*- discussed test cases. We had trouble running the test cases. Something to do with packages not being found.
4. *Write bits, bytes, Boolean test cases*-once specs approved. Plan to talk to bits, bytes, boolean team to see where they stand with everything.
5. *Type spec*-constructors, instantiate.
 - a. -Once more implementation details are laid out, we can tackle this bad boy. Some work has been started already(from a few meetings ago), but we have much more to do.
