

Presentation Brainstorm

- research Complex numbers
- establish meeting times
- make Complex group page
- identify tasks
- setup workstations
- make goals & have everyone responsible for part of whole goal
- collaborate to produce solutions
- use forums for communication
- understand CLforJava's sequence of executions and architectural design
- find Complex implementations with desired licenses
- combine implementations and modify each as needed
- used hyperspec and lispworks as specs to go by
- testing
- modify existing code
- understand promotion/demotion
- wanted to dive into coding very early
- iterative refinement of specs
- learn to estimate work via goal making and commitment
- evaluate correctness of chosen implementations
